SKILLS

JavaScript 1+ yrs

Machine Learning 1+ yrs

Python 2+ yrs

GitHub 1+ yrs

Front-End 1+ yrs

Html & css 1+ yrs

OTHER SKILLS

1. Teamwork.
2. Communication skills.
3. Time management.
4. Willing to learn and self learning.

AL-MEQDAD JABI

Front End developer & Artificial intelligence student

EDUCATION

Tawjihi scientific track **2017 - 2018**
King Talal School(Palestine / Nablus)

B. Computer Science CAP AI track **2018 - still going**
An-Najah University - Nablus (Palestine)

PROJECTS

Tweets Retrieval based on spatio-temporal **2021**
Tool: Elasticsearch ,React, Flask

The project idea is to display tweets on a map inside a selected bounding box showing each tweet location as a marker on the map, optionally choosing timestamp, keyword or time period for the retrieved tweets, and showing the tweets dashboards overtime.

OMEO **2022**
Tool: P5js, HTML, CSS

Project Idea: The project main idea is we wanted to make a game that kids can move and jump around instead of sitting all day playing on a computer or a console, so we created an AR (Augmented Reality) game that will help us achieve that goal using p5js p5play library and MediaPipe Body segmentation model.

Contribution: I implemented Level logic into the game, increasing the velocity of the obstacles on level up, adding multiple obstacles in different positions, adding a mute and restart key binds, and enhancing background, and the game font in general.
